### **ABSTRACT**

#### **Modranský, J., Púpavová, Z.: Fruittrees Occurence in Parks and Their Importance in Present Trends of Park Design**

The paper deals with occurrence of fruittrees in parks in two model areas in souther part of Slovakia. The analysis of their health condition is presented, too. The aim of the paper is to present the value of fruittrees and their use in renovation of older parks, as well as their use in a park design. The research of fruittrees occurrence in parks was carried out through years 2005–2009. Out of total 248 surveyed parks the presence of fruittrees was observed in 52 % of a parks or a non-park objects as for the southern-east part of Slovakia, furthermore, in 41 % of a parks or a non-park objects as for the southern part of central Slovakia. The results of the research show that fruittrees use in the park design is very frequent and at the same time their functional and aesthetic values can be used.

**Key words:** fruittree, park, trends in park design, health condition
