ABSTRACT

Štefunková, D.: Fragments of Historical Vineyard Structures in Land Shape

Paper deals with terminological and contextual aspects of chosen aesthetical indicators used in aesthetical analysis of historic vineyard structures. Aesthetical analysis creates a base of method of visual landscape quality assessment. Method of aesthetic quality analysis was applied in model territory of Svätý Jur, a part of Small Carpathian vineyard area. We describe the main signs of indicators, which are visible and identifiably in physiognomy of land use. Afterwards we define temporary occurrence of signs in model area. The results of evaluation of aesthetic quality of landscape elements show that historical vineyard structures are essential determinants of perceived landscape of model area. Finally the possibilities of their preservation and management are mentioned.

Key words: visual quality of landscape, aesthetical landscape indicators, historical vineyard structures
