### ABSTRACT

Králiková A.: **Hoverfly (Diptera, Syrphidae) fauna research on peach tree**

We present the results a study of hoverfly larvae and puparia that were taken from the leaves of peach trees. The dominant species were *Episyrphus balteatus* and *Syrphus vitripennis*. *Syrphus vitripennis* and *Syrphus ribesii* probably achieved greater dominance; however, we were unable to determine dead specimens of this genus at the species level.

**Key words:** Diptera, Syrphidae, dominance, peach tree
