ABSTRACT

Samešová D.: **Aspects of waste management in the environmental system of bussines management**

The aim of the paper is to analyze an implementation of the environmental management systems (EMS, EMAS) with the act on waste. The basic strategy is the prevention with the act on waste in Slovakia mainly on prevention and restriction of the waste generation, on the waste recovery and on the waste disposal which does not lead to a damage of the environment. EMS will predict to high respect of legislation and its making the assistance system as well, which does expect effectively monitoring of waste in business.

Key words: environmental management systems, waste management
