ABSTRACT

Ševčík J.: **New records of Diptera associated with fungi from the Czech and Slovak Republics**

New data on the biology of 60 species from 21 families of Diptera associated with fungi are presented in this paper. Two species of Cecidomyiidae, *Camptodiplosis auriculariae* Buxton et Barnes, 1953 and *Stomatosema nemorum* Kieffer, 1904, are for the first time recorded from the Czech Republic. The first rearing record from fungi is provided for the species *Tricimba albiseta* Dely-Draskovits, 1983 (Chloropidae), *Fannia umbrosa* (Stein, 1895) (Fanniidae) and *Mydaea nubila* Stein, 1916 (Muscidae).
