ABSTRACT

Tóthová A., Barták M. & Knoz J.: **Ceratopogonidae of Southern Moravia (NP Podyjí)**

During 2001–2002 material of Diptera was collected at one of the most remarkable places in the Czech Republic – National Park Podyjí. Natural conditions of NP Podyjí are very specific and offer a refuge to thermophilous and mountain species. From collected material were processed and determined altogether 84 species of the family Ceratopogonidae (notes on 17 species of the genus *Culicoides* in prep.), from which 66 species are known from the Czech Republic. This represents 42 % of the total Czech fauna. Also, 18 species are first recorded from the Czech Republic and 6 spp. are new for the historical territory of Moravia.

Key words: Czech Republic, Diptera, Ceratopogonidae, Podyjí, faunistics
